

Multiple Monitors for **Everyone**

SPLITVIEW FEATURES

- EASY TO USE

SplitView detects when multiple monitors are used and provides a true multi-monitor experience with remote sessions.

- EASY TO INSTALL

SplitView is installed on the terminal server or desktop being accessed remotely. There is no client side install.

- EASY TO CONFIGURE

SplitView can be configured with many powerful customization options, and includes several productivity boosting multi-monitor enhancements

MULTIPLE MONITORS FOR VIRTUALIZATION AND SERVER BASED COMPUTING

Multiple monitors have been shown to increase worker productivity by up to 50% in many industry studies. In certain verticals, such as the financial services industry, multiple monitors are an essential component of the computing environment. The lack of true multi-monitor support by remote desktop protocols has held back the widespread adoption of virtualization and server based computing technologies by the IT industry.

SplitView 2008 is a revolutionary software solution that **enables a true multi-monitor experience** with virtualization and server based computing technologies such as **Citrix (RDP and ICA), VMware VDI, Microsoft Terminal Services, Remote Desktop, HP RGS and Sun Ray ALP**. SplitView 2008 also provides several productivity boosting enhancements such as the ability to move windows efficiently between multiple monitors.
